The present invention describes nucleic acids encoding PRO secreted and transmembrane proteins used therapeutically. The PRO proteins have activated, anti-inflammatory, anti-proliferative and immunosuppressive activity. The proteins and polymuclectides can be used in therapy, identification of homologues, raising antibodies and design of probes and primers. They can be used in a range of diseases related to proteins they have homology with, e.g. a PRO protein having homology to complement proteins may be used in inflammatory responses
                                                                                                                                                                                                                                                                                                                                                                                                                                           TDFPSLTRNLPSQELPQEDSLLHGQFSQAVTPLAHHHTDYSKPTDISWRDTLSQKFGSSD 180

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodies, agoniets and antagoniets are useful for treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondyloarthropathies, systemic colerosis, idiopathic inflammatory myopathies, Sjogren's systemic eclerosis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sixty four PRO polypeptides, useful in the diagnosis and treatment of immune related disorders, e.g. systemic lupus erythematosis, rheumatoid arthritis, osteoarthritis, thyroiditis and diabetes mellitus.

The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. Anti-PRO antibodies are useful for the affinity purification of PRO from recombinant cell culture or natural sources
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HLEKLFKMDEASAQLLAYKEKGHSQSSQFSSDQEIAHLLPENVSALPATVAVASPHTTSA 240

Sequences AAC59788-C55846 and ABB34687-B34745 represent the proteins and their encoding nucleotide sequences, and sequences AAB34746-B3471 represent fragments of the proteins. Probes for the DNA sequences are represented by sequences AAC59847-C59596. The proteins exhibit neuroprotective, dermatological, immunosuppressive, antianaemic, nootropic, antiparkinsonian, cerebroprotective, haemostatic, vulnerary, cytostatic, antipsoriatic,

ancipacterial, virtuines, and rungitime activity: The proteins are useful as nutritional sources or supplements and in research. The proteins are useful for treating immune deficiency and disorders, which may be genetic or resulting from infections, autoimmune deficiency and disorders, which may be genetic or resulting from infections, autoimmune deficiencies such as anaemias by regulating hematopolesis. The proteins of deficiencies such as anaemias by regulating hematopolesis. The proteins are also useful in compositions for bone, cartilage, tendon, ligament and roplacement and in the treatment of wounds, incisions and culcers. Other uses include in the treatment of wounds, incisions and culcers. Other uses include in the treatment of central and peripheral nervous system and neuropathies such as Alzheimer's and Parkinson's culcers. Other uses include in the treatment of central and peripheral nervous system and neuropathies such as Alzheimer's and Parkinson's such as spinal cord disorders, head trauma and stroke. The proteins may also be used as a contraceptive, and for treating coagulation disorders, such as heamophilas. The protein and nucleotide sequences with cadherin activity are useful for treating commer. Other uses for the protein culcude for inhibiting the growth, infection or function of, or killing, infecting bodily characteristics such as height, weight, hair colour, effecting biorhythms or cardiac cycles or rhythms, effecting metabolism, anabolism, processing, utilization, storage or elimination of cateabolism, anabolism, carbohydrate, vitamins, minerals, cofactors, effecting behavioural characteristics providing analgesic effects and ceffecting behavioural characteristics such as psoriasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification, Where a primer set comprises:

(a) an oligo-dr primer and an oligonucleotide comprisentary to the complementary strand of a polynucleotide comprises one of the 5602 nucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 1'-end sequence, where the comprises a 1'-end sequence, where the comprises at least 15 nucleotides and the combination of the 5'-end sequence[3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers sets can be used in antisense therapy and in geneticiarly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods. AAH13613 to AAH13623 represent human amino acid sequences; and AAH13629 to AAH13612 represent considered in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           EDCINSCCSTKNISGDKACNLMIFDTRKTARQPNCYLFFCPNEEACPLKPAKGLMSYRII 120

Human secreted/transmembrane protein PRO361.

```
The present invention describes human secreted and transmembrane PRO proteins. The PRO proteins have cytostatic activity. The PRO proteins can be used for targeted delivery of bioactive molecules, such as toxins, radiolabels or antibodies, that cause cell death. PRO nucleotide sequences, and their fragments, can be used as hybridisation probes, in chromosomal and gene mapping, and in the generation of anti-sense RNA and DNA. They may also be used to produce transgenic animals which are used to develop and screen therapeutically useful reagents. The PRO nucleotide and protein sequence can be used for tissue typing and in treating cancer. Anti-PRO antibodies can be used in diagnostic assays. AAF4420 to AAF44470 represent PCR primers and hybridisation probes used in the labolation of human PRO sequences. AAF44687 to AAF4453 and AAB65154 to AAF85500 represent human PRO polynucleotide and protein sequences given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         420
                                                                                                                                                                                             PRO polynucleotides used to produce polypeptides used to target bioactive molecules such as toxins, radiolabels or antibodies, to specific cells, to cause targeted cell death.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              300

The invention relates to an isolated PRO polypeptide (a secreted or transmembrane protein) comprising: (a) at least 80% sequence identity or constitutes when compared to any of 15 sequences; fully defined in the specification, lacking or with its associated signal peptide; or (b) at specification, lacking or with its associated signal peptide; or (b) at least 80% sequence encoded by the full-length coding sequence of a DNA deposited in the American Type Culture CC coling sequence of a DNA deposited in the American Type Culture as a RNO protein; (b) at least 80% sequence identity to a nucleotide sequence contains a proportion; (b) at least 80% sequence identity to a nucleotide sequence or full-length coding sequence identity to a nucleotide sequence or full-length coding sequence identity to a nucleotide sequence or full-length coding sequence of a construction of the specification; or (c) at least 80% sequence identity to a nucleotide sequence of a coding sequence identity to a nucleotide sequence of a coding sequence identity to a coding sequence of a coding sequence identity to a nucleotide sequence of a coding sequence identity to a coding sequence of a coding sequence identity to a coding sequence of a coding sequence identity as vector comprising the vector comprising the vector comprising the vector which, when cultured under conditions suitable coding sequence; and (5) a nati-post of the present invention are useful for the diagnosis and treatment of the present invention are useful for the diagnosis and treatment of immunodeficiency syndrome), cancer, atherosclerosis, inflammatory disease, diabetic complications, cardiac injury and organ failure. PR01346 Novel isolated PRO polypeptides e.g., PRO826, PRO1068, PRO1184, PRO1346 and PRO1375, which stimulate proliferation of stimulated T-lymphocytes are therapeutically useful for enhancing immune response and in cancer treatments

Claim 12; Fig 328; 648pp; English.

The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in inking a bioactive molecule to a cell expressing a RO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus cusful for treating cardiac insufficiency disorders. PRO156, PRO186 stimulate adrenal cortical capillary endothelial growth, and PRO536, PRO943, PRO826, PRO186 or PRO535, PRO816, PRO943, PRO826, PRO186 or PRO535, PRO816, and are thus useful for treating conditions or disorders where angiogenesis would be beneficial, e.g. wound healing and antagonist of this polypeptide are useful for treating cancerous tumours. PRO812 inhibits vascular endothelial growth factor (VEGF) stimulated proliferation of endothelial cells and is thus useful for inhibiting endothelial cell growth. PRO826, mammals which would be beneficial in inhibiting tumour growth.

```
\mathbb{Z}_{\mathcal{A}}
         stimulated T-lymphocytes and are therapeutically useful for enhancing immune response. PRO828, PRO826, PRO1068 or PRO1132 enhance survival of retinal neurons cells (PRO1132 is also enhances survival/proliferation of rod photoreceptor cells) and therefore are useful for treating retinal disorders of injuries, e.g. retinitis pigmentosum, AMD. PRO819, PRO813 and PRO11066 induce proliferation of mammalian kidney mesangial cells, and therefore are useful for treating kidney disorders associated with decreased mesangial cell function such as Berger disease or other nephropathies associated with dermatitis, herpetiformis or Crohn's disease. PRO1130, PRO814, PRO1132, PRO1192 and PRO1387 induce the proliferation and/or redifferentiation of chondrocytes in culture and are thus useful for treating sports injuries, and arthritis. This is the amino acid sequence of a novel human PRO protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              EASPGSSSQGSVPENQYGLPPEKWLLIGSLLFGVLFLVIGLVLLGRILSESLRRKRYSRL 420

New transmembrane polypeptides and nucleic acids encoding the polypeptides, useful in gene therapy, in chromosome identification, as chromosome markers, or in generating probes.

# Claim 12; Fig 328; 650pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides comprising a sequence without signal peptide and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. The PRO polypeptides or proteins at least polypuclectides are also useful in gene therapy, in chromosome identification, as chromosome markers, or in generating probes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and the isolated nucleic acids may be used for recombinantly expressing those markers. The PRO olypeptides and nucleic acids may also be used in tissue typing. Anti-PRO antibodies are useful in diagnostic assays for

                                                                                                                                                                                                                                ð
                                                                 ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to the isolation of novel human PRO
polypeptides, and the polynucleotide sequences encoding them. The PRO
colypeptides are secreted and transmembrane proteins. The PRO
polypeptides are useful for detecting other PRO polypeptides, for linking
polypeptides are useful for detecting other PRO polypeptides, for modulating
colipogical activities of cells expressing PRO polypeptides, for modulating
colipogical activities or antagonists. The pRO polypeptides, and for for
identifying agonists or antagonists. The polynucleotide sequences
concoding PRO polypeptides are useful as hybridisation probes, in
chromosome and gene mapping, in the generating probes, in
chromosome and gene mapping, in the generating transgenic animals,
in the preparation of PRO polypeptides, for generating probes, in
cor knockout animals, to construct hybridisation probes for mapping the
gene which encodes the PRO polypeptides, in gene therapy, for chromosome
condition, as chromosome markers, and for the genetic analysis of
induitication, as chromosome markers, and for generating probes for PCR,
Northern analysis, Southern analysis and Western analysis, ABU13860-
ABU14006 represent the human PRO polypeptides of the invention. Note: The
from the preparation of properties and for generating processing the form the properties of the invention of the properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TDFPSLTRNLPSQELPQEDSLLHGQFSQAVTPLAHHHTDYSKPTDISWRDTLSQKFGSSD 180

                                                             ö
                                                                                                                                                                                                                                                                                                                         The invention relates to a human secreted and transmembrane polypeptide (PRO) and the polynucleotide encoding it. The PRO polypeptide or polynucleotide is useful in pharmaceuticals, disquoretics, biosensors or bioreactors. These are particularly useful for detecting or treating cancers, inflammatory diseases, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, acquired immunodeficiency syndrome (AIDS) and diabetic complications in mammals, e.g. humans, dogs, cats, cattle, horses, sheep, pigs, goats or rabbits. The sequences are also useful in biotechnological and medical research and in various industrial applications. Sequences ABU60230-ABU60245 represent human PRO polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  disease
```

The invention describes a new isolated nucleic acid molecule comprising the full length coding sequence of the DNA deposited with the American Type Culture Collection (e.g. ATC Deposit No. 20961, 552-PTA, 819-PTA, 209439, 203135, etc); or a sequence with at least 80% identity to a DNA encoding a PRO polypeptide. The PRO polypeptides or polynucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are particularly useful for detecting or treating e.g. malignancies or cancers (e.g. ovarian cancer, colorectal cancer, Kaposi's sarcoma, New genes and secreted and transmembrane polypeptides (e.g. PRO183 or PRO184), useful for treating or diagnosing e.g. ovarian cancer, Kaposi's sarcoma, leukemia, lymphoma, hepatitis B, multiple sclerosis or Crohn's DL; Godowski PJ; Paoni NF; Wood WI; Ashkenazi AJ, Baker KP, Botstein D, Desnoyers L, Eaton Ferrara N, Fong S, Gerber H, Gerritsen ME, Goddard A, Grimaldi JC, Gurney AL, Kljavin IJ, Napier MA, Pan J, Roy MA, Stewart TA, Tumas D, Watanabe CK, Williams PM, Claim 12; Fig 328; 663pp; English.

The PRO polypeptides are useful in drug screening, particularly as targets for therapeutic intervention in these diseases, and in the diagnostic determination of the presence of these diseases. The PRO polypeptides are also useful as molecular weight markers, or for chromosome identification. The PRO genes are useful as hybridisation probes, or for screening libraries of human cDNA, genomic DNA or mRNA. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. This is the amino acid sequence of a novel human secreted and transmembrane PRO polypeptide 9 9 1 MFFGGEGSLIYTLVIICFLTLKLSASQNCLKKSLEDVVIDIQSSLSKGIRGNEPVYTSTQ 61 EDCINSCCSTKNISGDKACNLMIFDTRKTARQPNCYLFFCPNEEACPLKPAKGLMSYRII 121 TDFPSLTRNLPSQELPQEDSLLHGQFSQAVTPLAHHHTDYSKPTDISWRDTLSQKFGSSD TPKPATILIPTNASVTPSGTSQPQLATTAPPVTTVTSQPPTTLISTVFTRAAATLQAMATT 1 MFFGGEGSLTYTLVIICFLTLEASQNCLKKSLEDVVIDIQSSLSKGIRGNEPVYTSTQ EDCINSCCSTKNISGDKACNLMIFDTRKTARQPNCYLFFCPNEBACPLKPAKGLMSYRII 121 TDFPSLTRNLPSQELPQEDSLIHGQFSQAVTPLAHHHTDYSKPTDISWRDTLSQKFGSSD HLEKLFKMDEASAQLLAYKEKGHSQSSQFSSDQEIAHLLPENVSALPATVAVASPHTTSA AVLTTTFQAPTDSKGSLETIPFTEISNLTLNTGNVYNPTALSMSNVESSTMNKTASWEGR Gaps 0; Length 431; Indels 100.0%; Score 2211; DB 6; 100.0%; Pred. New transmembrane polypeptides and polynucleotides useful for chromosome identification, tissue typing, gene therapy, in chromosome and gene mapping, or as molecular weight markers.

Claim 12; Fig 32; 172pp; English.

The invention relates to an isolated nucleic acid encoding a secreted/
transmembrane polypeptide (designated as PRO proteins). 15 PRO
polypeptides and their encoding polymuclectides are disclosed. Also
conjuded are a vector comprising the PRO uncleic acid, a host cell
included are a vector. a process for producing a PRO polypeptide (by
conjuded are a vector, a process for producing a PRO polypeptide (by
conjuded and recovering the PRO polypeptide (by
conjuded polypeptides, and reast 80% amino acid sequence identity to
isolated polypeptides, a chimaeric molecule comprising PRO fused to a
che PRO polypeptides, a chimaeric molecule comprising PRO fused to a
cherologous amino acid sequence are useful as hybridisation probes,
to PRO. The PRO nucleotide sequence are useful as hybridisation probes,
con chromosome and gene mapping, in generating sense and antisense RNA or
CDNA, in generating transgenic or knock-out animals which can be used in
conformed and screening of therapeutically useful reagents, and in
conformed also be used for chromosome identification, and tissue typing
conformed and screening of the PRO polypeptides and nucleic
conformatified as chordin) is a candidate gene for Cornelia de Lange
Syndrome. Other PRO proteins are variously implicated in immune
conformed the proporteins are variously implicated in immune
conformed the proportein sease, organ failure, atherosclarosis, cardiac
injury, infertility, birth defects, premature aging, cardiac injury,
